Verified Canadian Federal Regulatory Framework — 3 Product Examples

Example 1: Children's Toys

Element	Detail
Product	Children's toys (intended for children under 14)
Federal Law	<i>Canada Consumer Product Safety Act</i> , S.C. 2010, c. 21

Primary Regulation *Toys Regulations*, SOR/2011-17

Source: The Toys Regulations (SOR/2011-17) are confirmed as active and accessible on the Department of Justice's Justice Laws website (laws-lois.justice.gc.ca). Recent amendments were published as recently as December 2024, confirming the regulation remains actively updated.

Example 2: Pesticides

Element	Detail
Product	Pesticides and pest control products (herbicides, insecticides, fungicides, etc.)
Federal Law	<i>Pest Control Products Act</i> , S.C. 2002, c. 28 (Royal Assent: December 12, 2002; in force: June 28, 2006)
Primary Regulation	<i>Pest Control Products Regulations</i> , SOR/2006-124
Supplementary Regulations	<i>Pest Control Products Incident Reporting Regulations</i> , SOR/2006-260 <i>Pest Control Products Sales Information Reporting Regulations</i> , SOR/2006-261 <i>Pest Control Products Fees and Charges Regulations</i> , SOR/2017-9 <i>Review Panel Regulations</i> , SOR/2008-22
Intersecting Law	<i>Food and Drugs Act / Food and Drug Regulations</i> , C.R.C., c. 870 (for maximum residue limits on food)
Administering Body	Health Canada — Pest Management Regulatory Agency (PMRA)

Source: *Health Canada's Pest Management Regulatory Agency (PMRA) is responsible for administering the Pest Control Products Act on behalf of the Minister of Health. The current Pest Control Products Act received Royal Assent on 12 December 2002, and came into force on 28 June 2006. The primary regulation under the Act is the Pest Control Products Regulations, SOR/2006-124. The PMRA also specifies maximum residue limits on foods as per the Pest Control Products Act, and regulates the default MRL of 0.1 part per million as per Division 15, Adulteration of Food, B.15.002 of the Food and Drug Regulations.*

This is an excellent example of **multi-statute intersection** — updates to pesticide residue limits may flow through either the *Pest Control Products Act* or the *Food and Drug Regulations*, depending on whether they relate to the product registration or to food safety limits.

Example 3: Electric Bicycles (Power-Assisted Bicycles / PABs)

Regulatory Angle	Federal Law	Regulation
Product classification (is it a bicycle or a motor vehicle?)	<i>Motor Vehicle Safety Act</i> , S.C. 1993, c. 16	<i>Motor Vehicle Safety Regulations</i> , C.R.C., c. 1038 — PAB definition in s. 2
General consumer product safety (structural integrity, labeling, braking)	<i>Canada Consumer Product Safety Act</i> , S.C. 2010, c. 21	General consumer product safety rules
Lithium-ion battery transport	<i>Transportation of Dangerous Goods Act</i> , S.C. 1992, c. 34	<i>Transportation of Dangerous Goods Regulations</i> , SOR/2001-286

Source — Federal PAB Definition (verified): *Since 2000, Canada's Motor Vehicle Safety Regulations (MVSr) have defined Power Assisted Bicycles (PABs) as a separate category, which require no license to operate. PABs are currently defined as a two- or three-wheeled bicycle equipped with handlebars and operable pedals, an attached electric motor of 500W or less, and a maximum speed capability of 32 km/h from the motor over level ground. Other requirements include a permanently affixed label from the manufacturer in a conspicuous location stating the vehicle is a power-assisted bicycle under the statutory requirements in force at the time of manufacture.*

Why classification matters: *In Canada, the term "power-assisted bicycle" is used in the Canadian Federal Legislation, but is carefully defined to only apply to electric motor assist, and specifically excludes internal combustion engines. If an e-bike does not meet the PAB definition under the MVSr (e.g., motor exceeds 500W or top speed exceeds 32 km/h), it falls into the full motor vehicle regulatory regime — a far more onerous standard.*
